

# STEAMPUNK BATHROOM

Participant ID : ASDA22-90428

# Design Concept

In the late 18th century, the first industrial revolution occurred, bringing steam power, commercial products, and technology to essentials in people's daily lives. The glamorous time of urbanization was also to start. Hence, our commonly used appliances and us - the users - strongly connect to each other. This thinking embellishes the idea that the surroundings provoke emotions as we utilize the space.

People with a decent look reminisce on how instruments hide their complicated inner design with a delicate outer look. However, the bathroom brings us the opportunity to take off all coverings and enjoy our simple yet true selves. The murmur watering sound passing through the water pipelines could bring people back to the first revolution in which the first industrial machine was born.

# Design: Floor Plan and Elevations

SECTION

The 6m2 compact space utilizes water pipe decor and an inclined glass roof to reproduce the factory scene in the last centuries. The section divides into toilets, sink, and bathroom for many people to use simultaneously.

FLOOR PLAN

## Design Visuals: Full Bathroom

"Babble," "Ding dong," and "Whizzing." The familiar sound comes to life from the industrial eras, from the humming fan, echoing our beloved mom's lullaby. Our childhood these days is neither spacious field nor mountainous ranges, but the recollection of the basis of industrial growth.

## Design Visuals: Shower Area

1000mm x 1100mm freestanding shower with dark glass doors takes the daylight from the skylights. The EasySET shower set uses a twist operation similar to the early industrial machines giving a sense of comfort and convenience. The walls are mainly tiled with smooth black brick, a subtle highlight in the wall storage compartment, and the glass panel texture separating the shower and toilet areas.

## Design Visuals: Toilet Area

The toilet is detached simple, and the main decoration is the running water pipes.

## Design Visuals: Basin Area

Basin area is designed with double sinks and many shelves for easy space organization. The white-tiled walls next to the sink are brighter than the entire bathroom space to highlight the area. In addition, decorative clocks are attached to the movable wall, increasing aesthetics as well as helping to protect the belongings from the water.
